What is METS?

- METS, a Digital Library Federation initiative, attempts to ... provide an XML document format for encoding metadata necessary for both management of digital library objects within a repository and exchange of such objects between repositories (or between repositories and their users).*

*from <<http://www.loc.gov/standards/mets/METSOverview.v2.html>>

Purposes of our METS documents

- Provide metadata needed by page turner
 - Long-term management of the digitized books as digital library objects
-

Metadata for interface

- descMD
 - fileSec
 - structMap
-

METS div types

- Show/hide nodes in a book structure
 - Extract any given structure node from the whole
 - Generate lists of illustrations
 - Flag illustrations within list of book structure
 - Show/hide blank pages
-

Metadata for digital object management

- another fileSec
 - techMD
 - Other options
 - rightsMD
 - sourceMD
 - digiprovMD
-

So now what?

- Apply work on div types for book-like objects
- It's a BAD idea to create METS documents by hand
